A native kitchen, still unmistakably Bord.

A complete visual translation of 32 supplied web pages into an iOS-first Expo application - preserving the editorial cookbook identity while adopting native navigation, controls, safe areas, accessibility, and selective Liquid Glass.

Deliverables include high-resolution PNGs, contact sheets, a local gallery, source audit, tokens, and an Expo implementation blueprint.

SOURCE AUDIT

What changed and why

Native navigation

The compressed desktop header becomes five persistent tabs plus stack navigation. Global chrome no longer competes with page controls.

Task-first hierarchy

Editorial type remains on identity-rich moments; settings and operational screens become denser, clearer, and quicker to act on.

Reachable actions

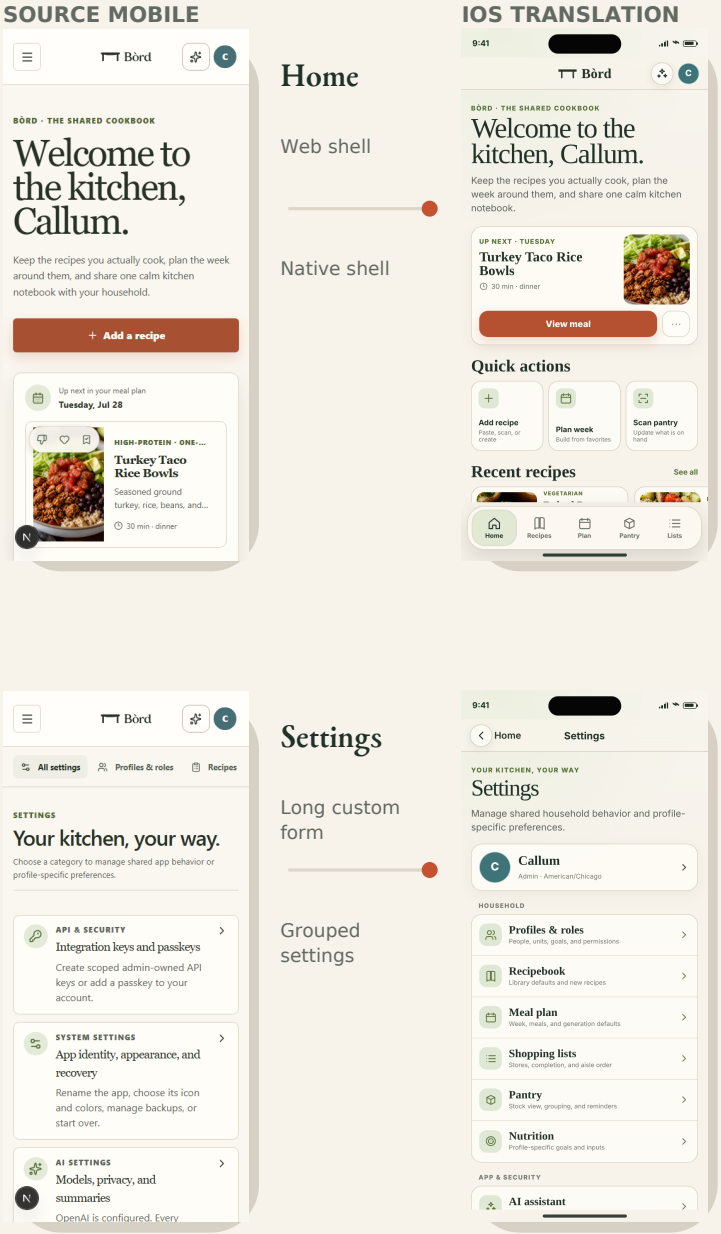

Cook, save, generate, create, and shopping actions move to safe-area bottom bars or standard navigation actions.

Fewer boxes

Spacing, list grouping, and separators replace nested bordered cards. Content layers remain opaque for reading.

Accessible by construction

Dynamic Type, 44-point targets, native semantics, reduced transparency, and non-color status cues are treated as requirements.

DESIGN SYSTEM

Editorial cookbook, native operating system

CORE PALETTE

Paper	Ink	Sage	Olive	Terracotta	Teal
#F7F3EB	#203128	#DDE8D1	#5E7C3D	#C4512F	#3F7C7E

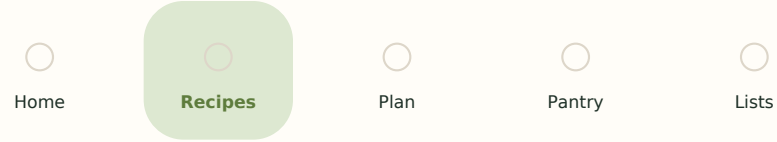

TYPE ROLES

Dinner begins here.

Functional controls use the system font.

Serif type carries identity, recipe names, and editorial moments. System text carries controls, metadata, settings, quantities, and long-form utility copy.

PRIMARY NAVIGATION

Each tab owns its own stack so users keep place when switching destinations. Nutrition, Assistant, Security, and Settings remain contextual routes.

LIQUID GLASS POLICY

Glass explains controls. Paper carries content.

USE GLASS FOR

Tab bars; over-image navigation; sticky cook, capture, planner, shopping, and assistant controls; system form-sheet backgrounds.

KEEP OPAQUE

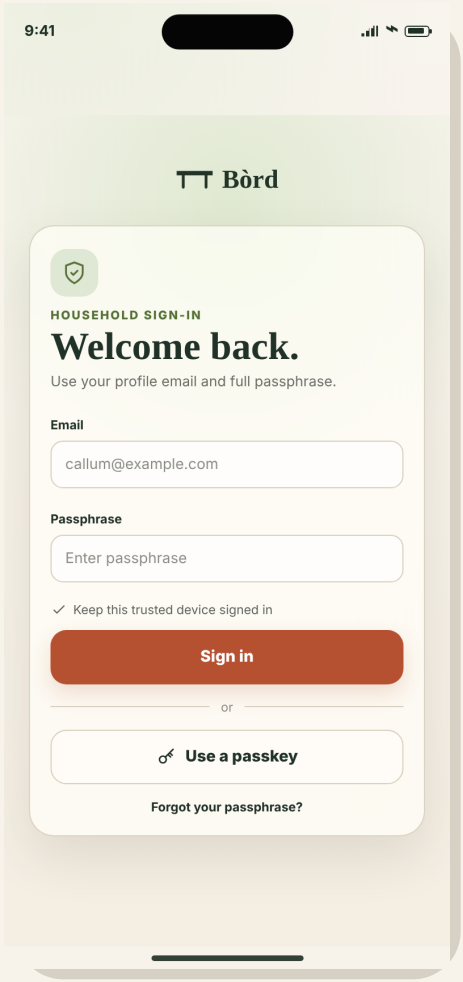

Recipe reading; ingredient lists; pantry rows; nutrition charts; settings groups; food cards; long explanatory text.

FALL BACK CLEANLY

Older iOS uses tinted blur or an opaque material. Android uses Material 3 tonal surfaces. Reduced Transparency always wins.

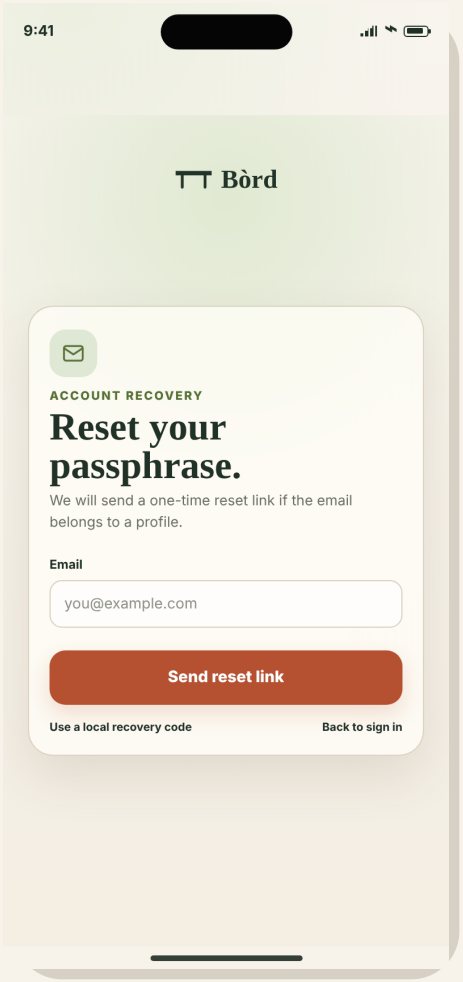

SCREEN SET 01-04

iPhone mockups

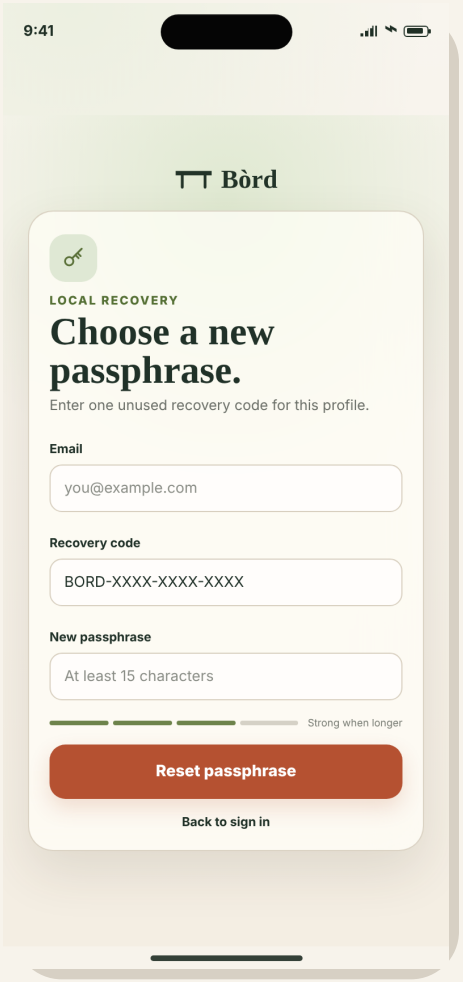

01 Sign in

Native sign-in hierarchy with passkey as a first-class action.

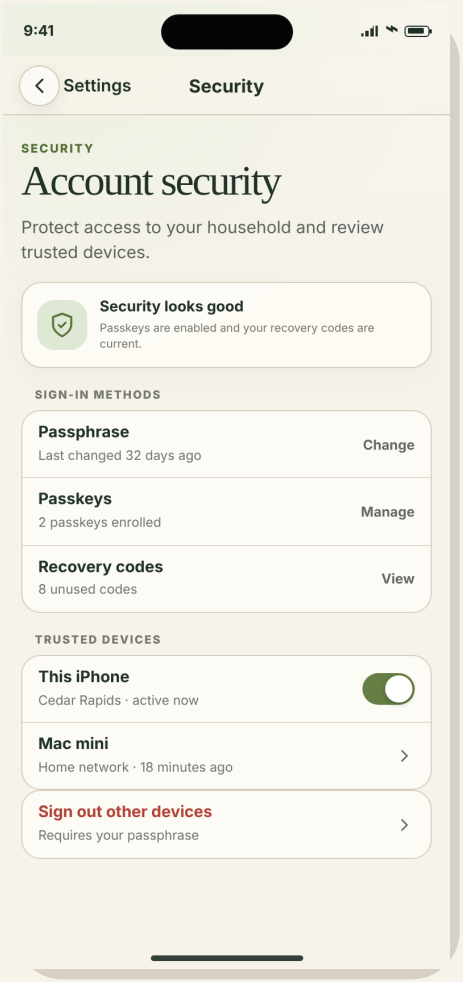

02 Forgot password

Focused recovery flow with one primary action and clear alternatives.

03 Reset password

Recovery-code flow with visible password requirements.

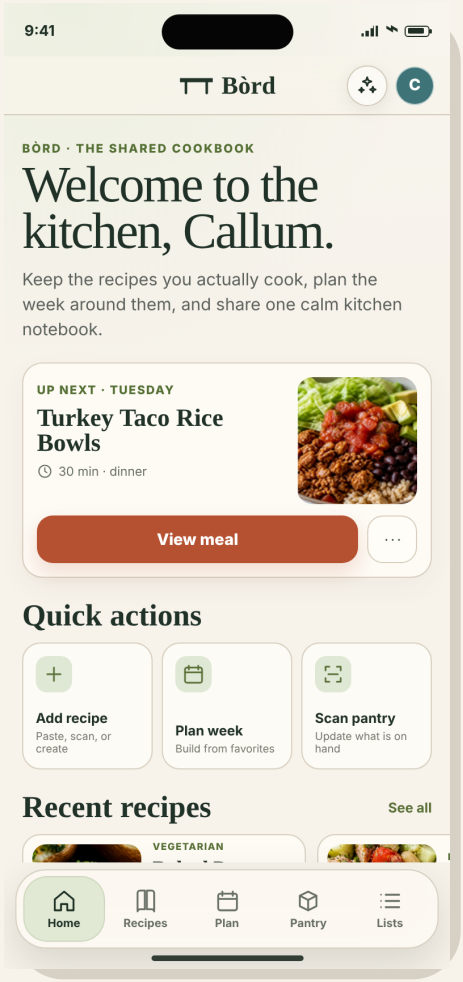

04 Account security

Grouped iOS security settings instead of a long web form.

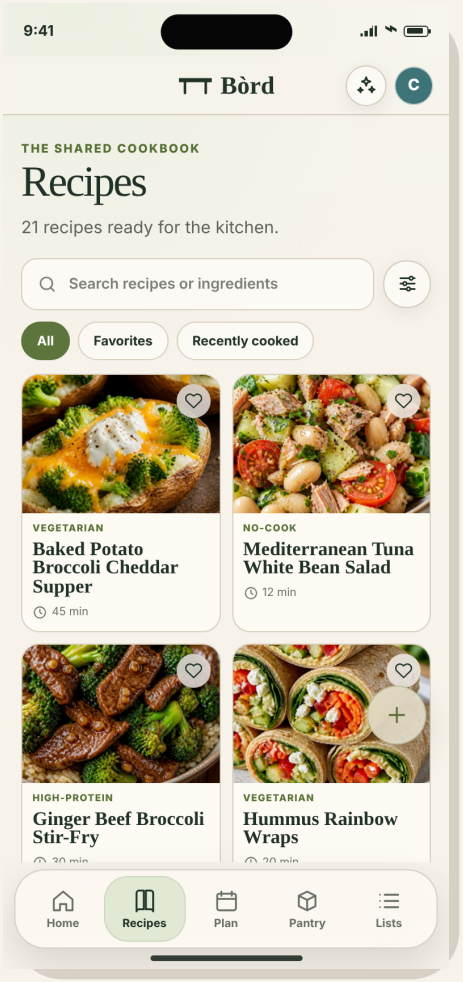

SCREEN SET 05-08

iPhone mockups

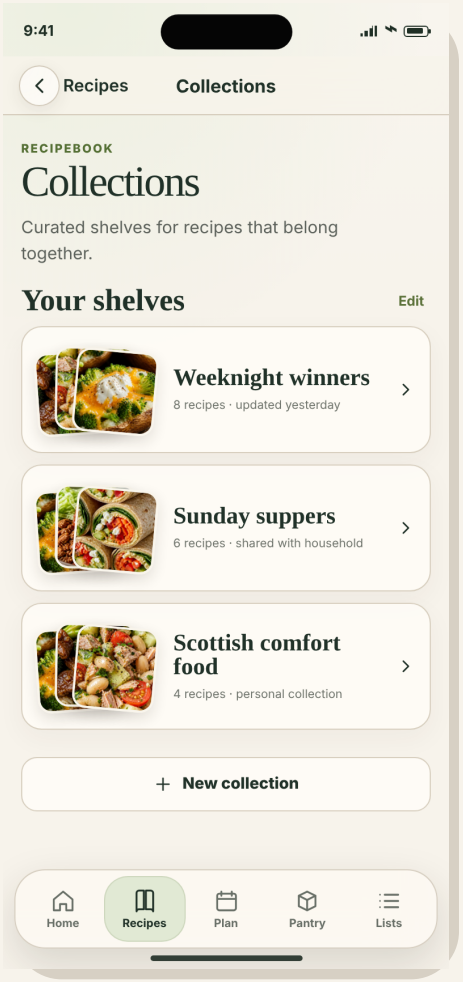

05 Home

Editorial welcome, next-meal focus, and thumb-reachable quick actions.

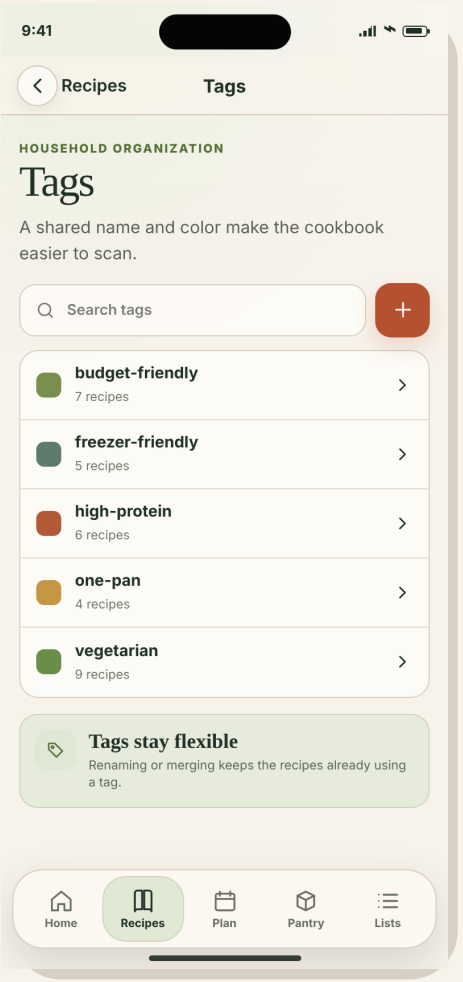

06 Recipe library

Search-first two-column library with compact native filters.

07 Collections

Visual cookbook shelves with stacked recipe previews.

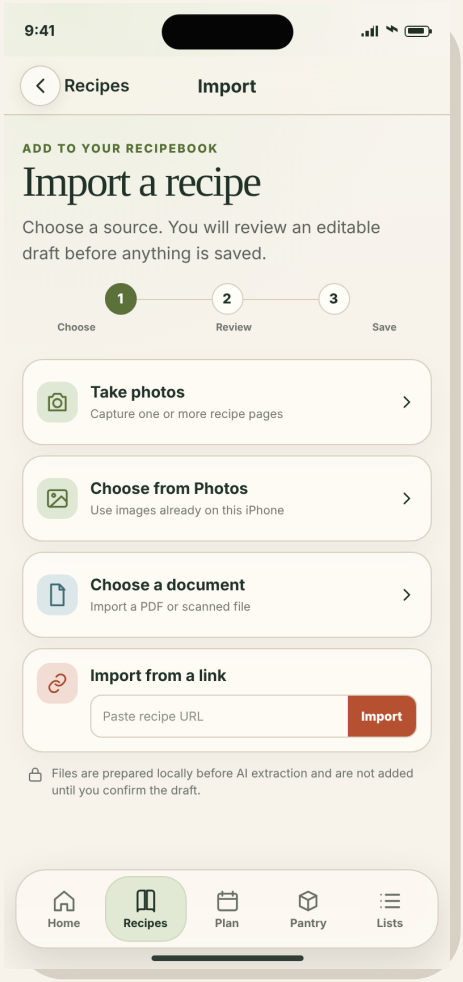

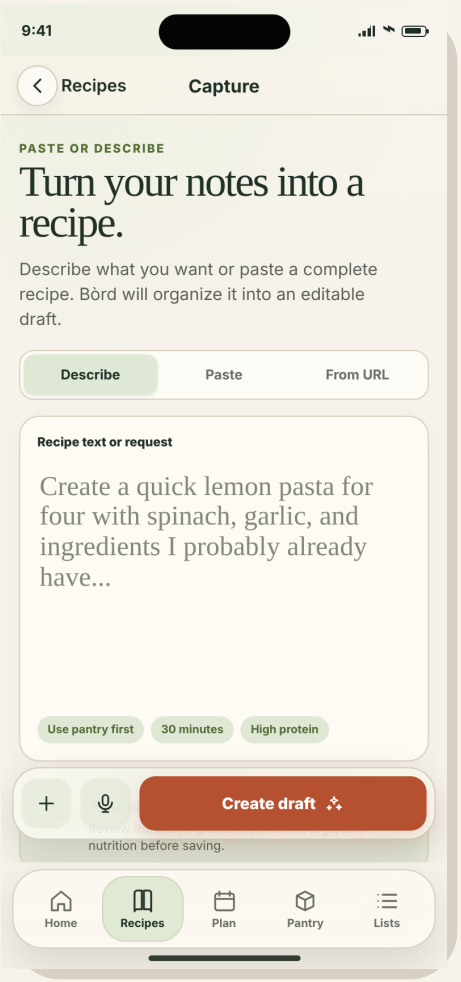

08 Tags

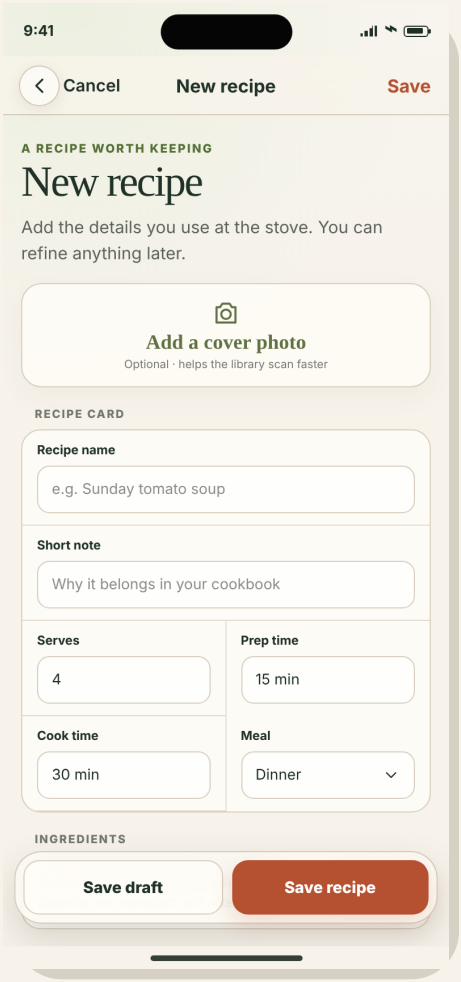

Scannable tag list with color, counts, and native row actions.

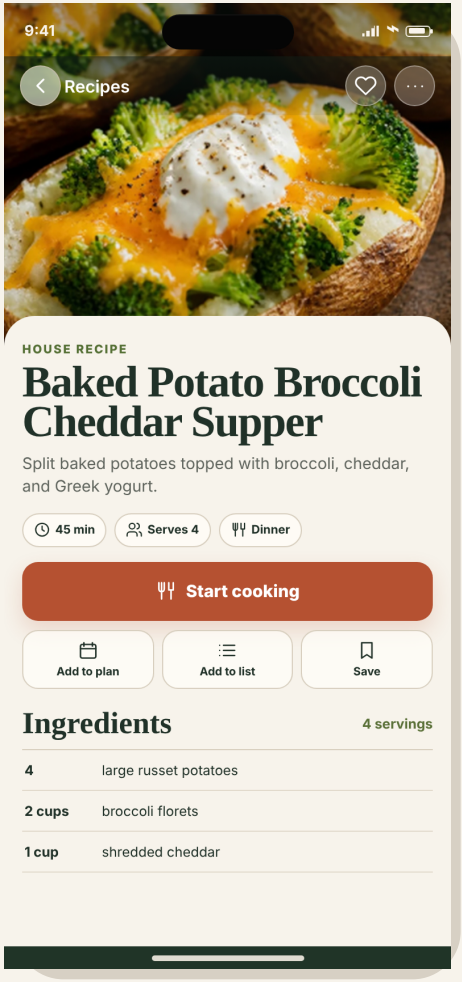

SCREEN SET 09-12

iPhone mockups

09 Import recipe

Camera, photo, document, and URL entry points in one native chooser.

10 Capture notes

Single compose surface with mode switcher and bottom action bar.

11 New recipe

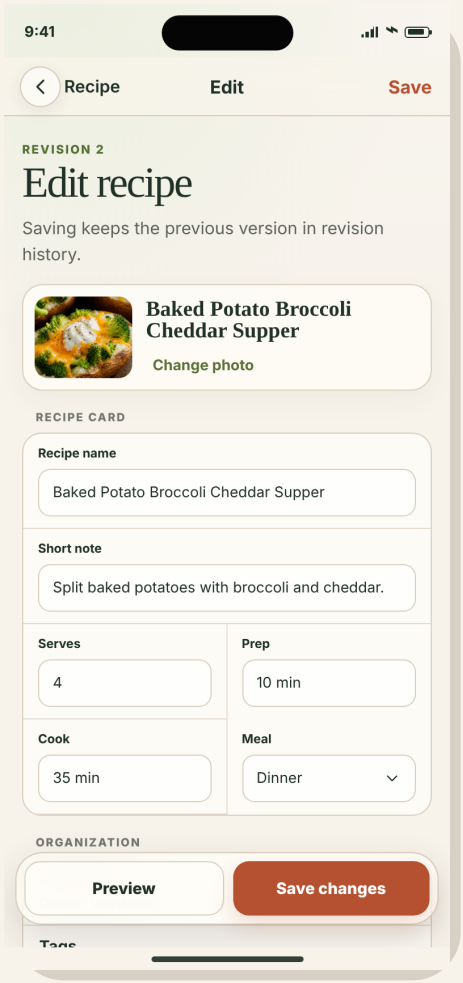

Full-screen structured form with progressive sections.

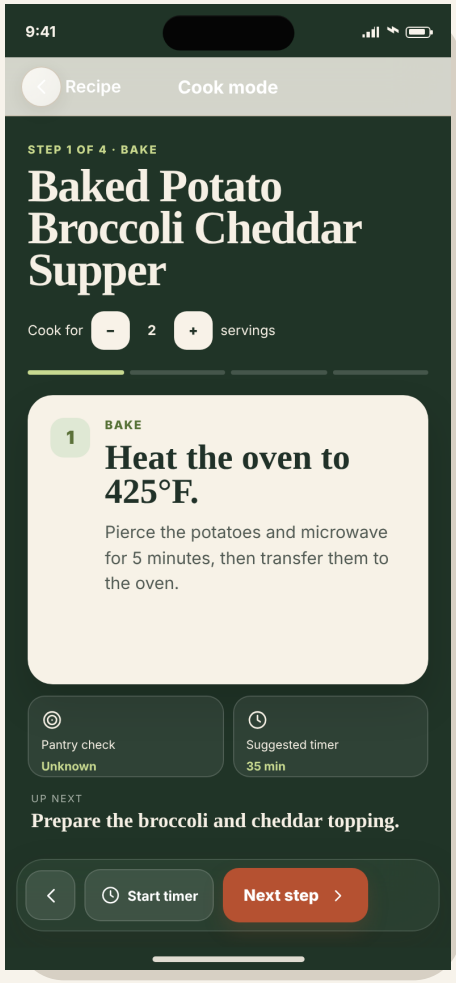

12 Recipe detail

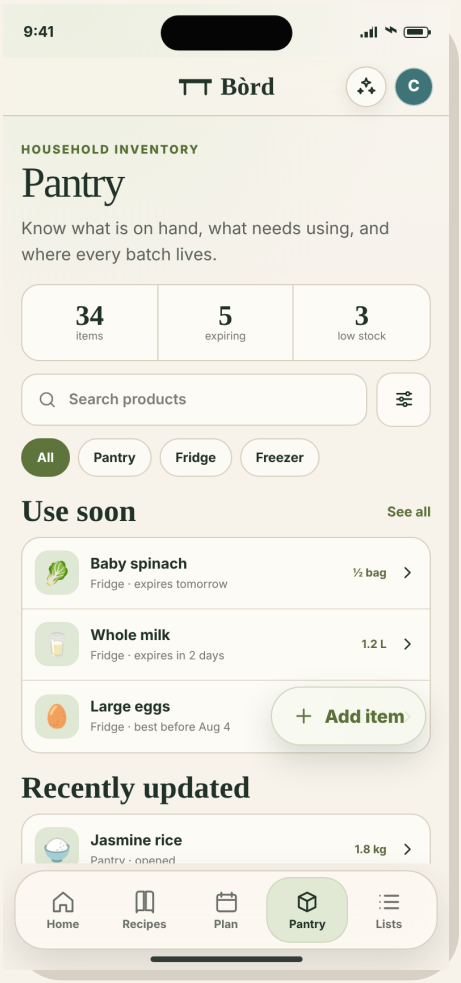

Rich hero, condensed metadata, and a clear cooking action.

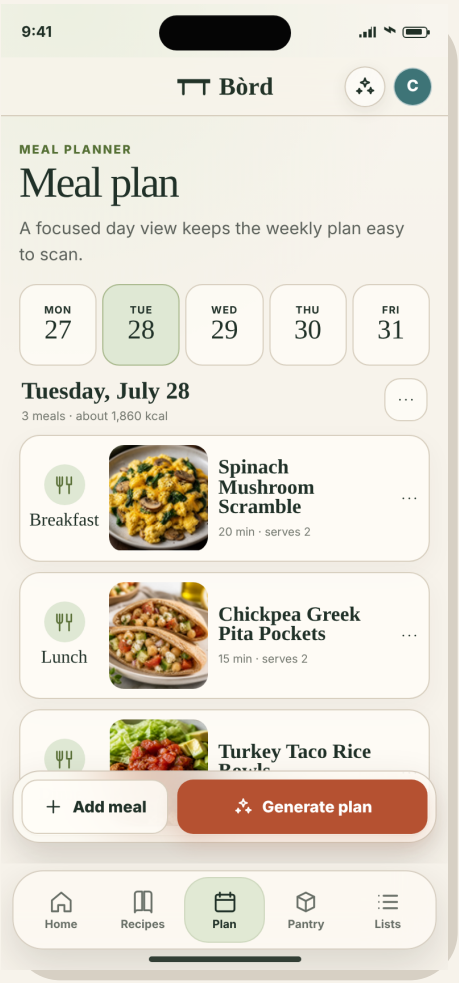

SCREEN SET 13-16

iPhone mockups

13 Edit recipe

Native form groups with persistent Save action.

14 Cook mode

Immersive step-by-step cooking with timer and one-handed controls.

15 Pantry

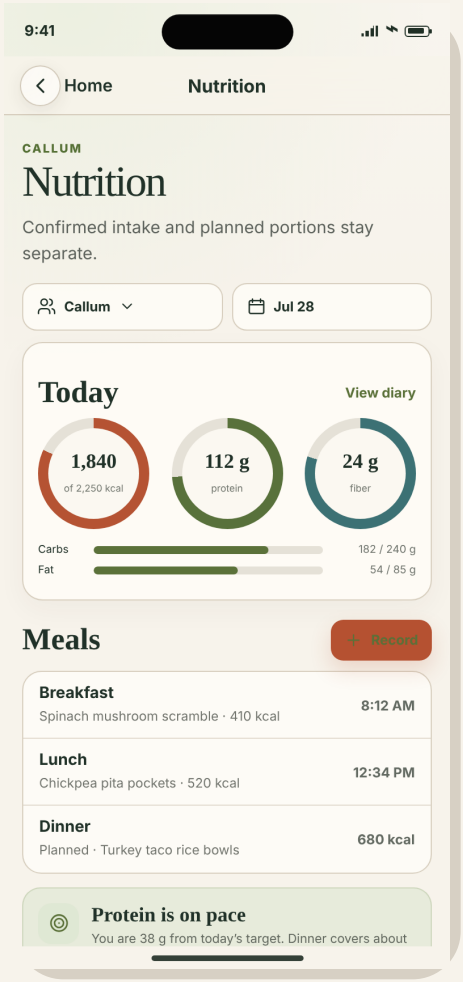

Inventory summary, search, location scopes, and swipe-ready rows.

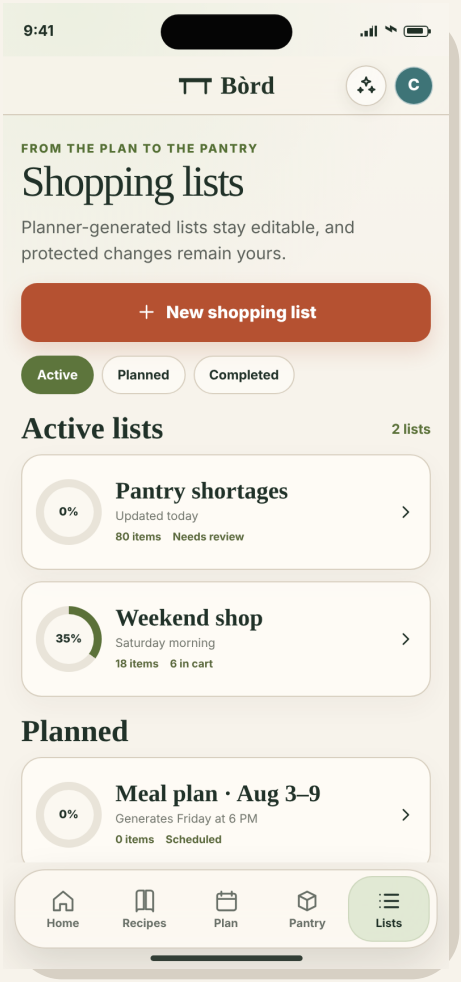

16 Meal planner

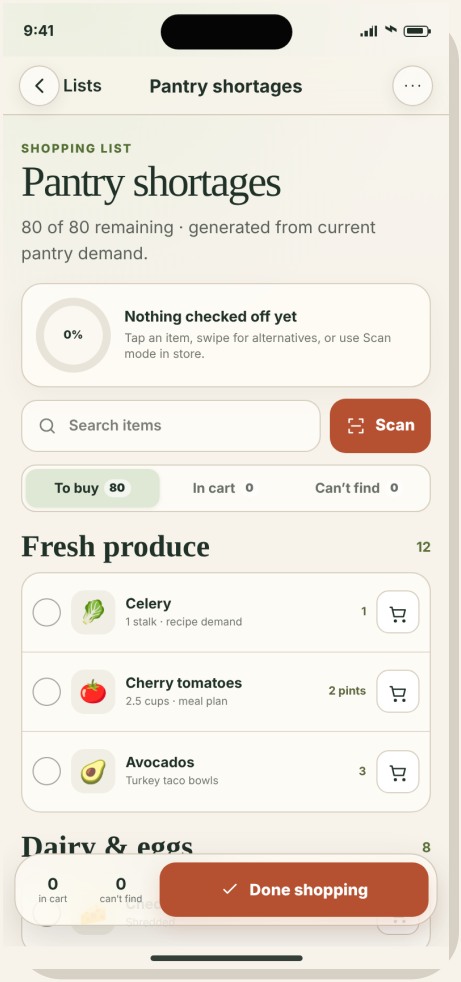

Day-focused mobile planner with compact date carousel.

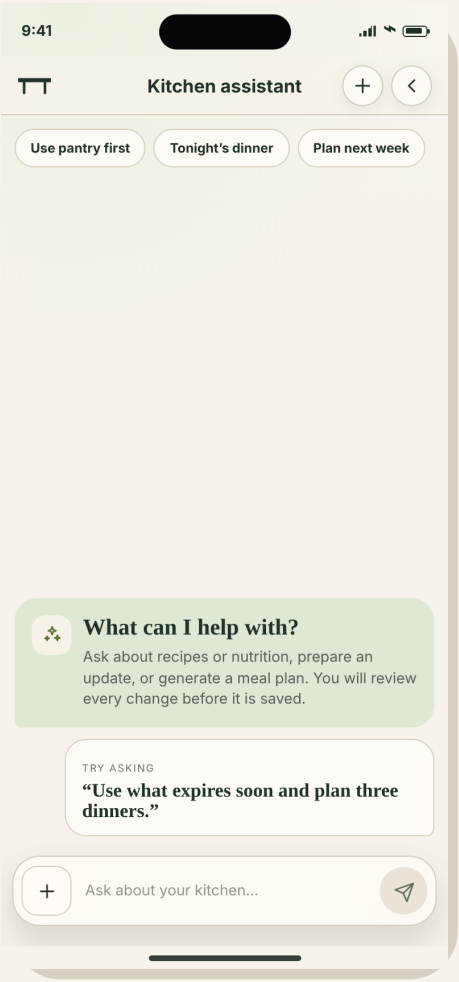

SCREEN SET 17-20

iPhone mockups

17 Nutrition

At-a-glance rings and a concise daily log.

18 Shopping lists

List-first dashboard with visible progress and quick creation.

19 Shopping list detail

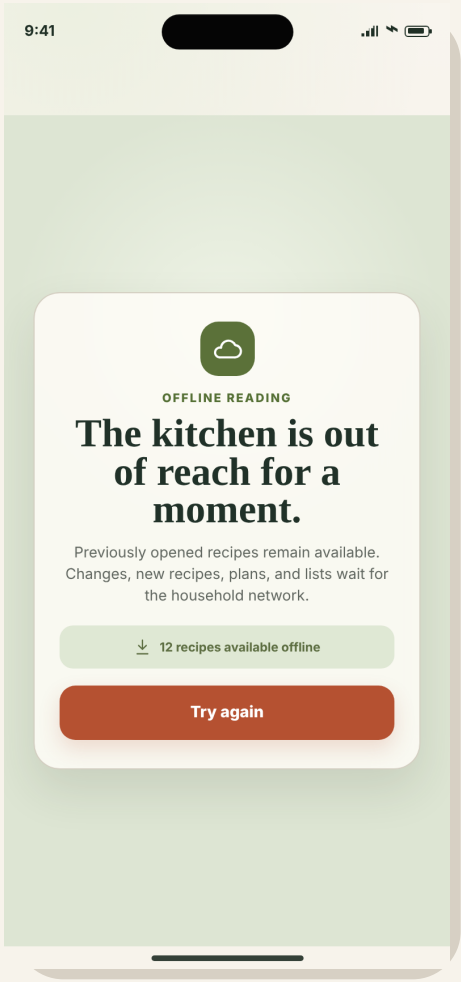

Sticky glass action bar and clear item-state segmentation.

20 Kitchen assistant

Native chat layout with contextual prompts and review-safe framing.

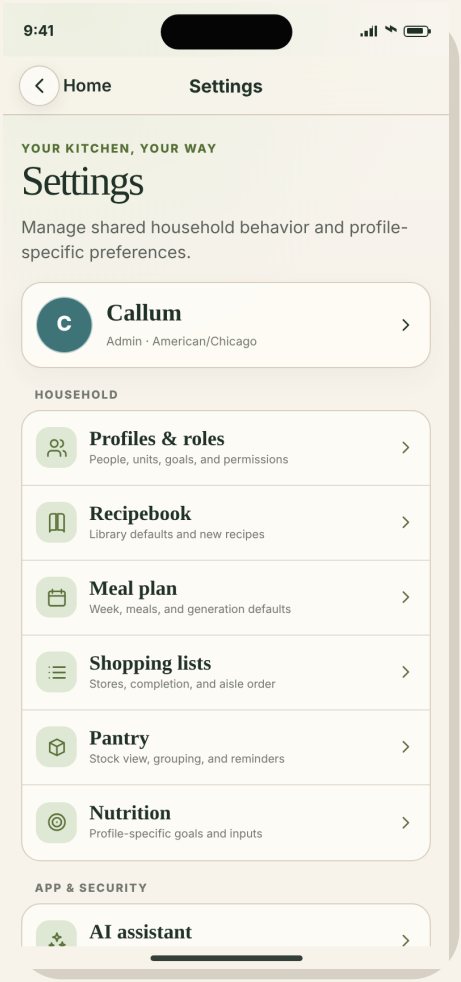

SCREEN SET 21-24

iPhone mockups

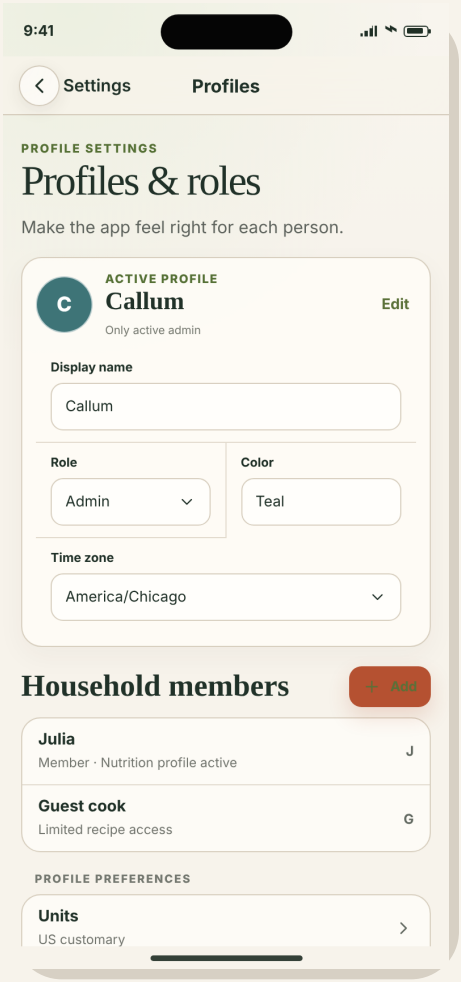

21 Offline

Calm offline state with downloaded-content status.

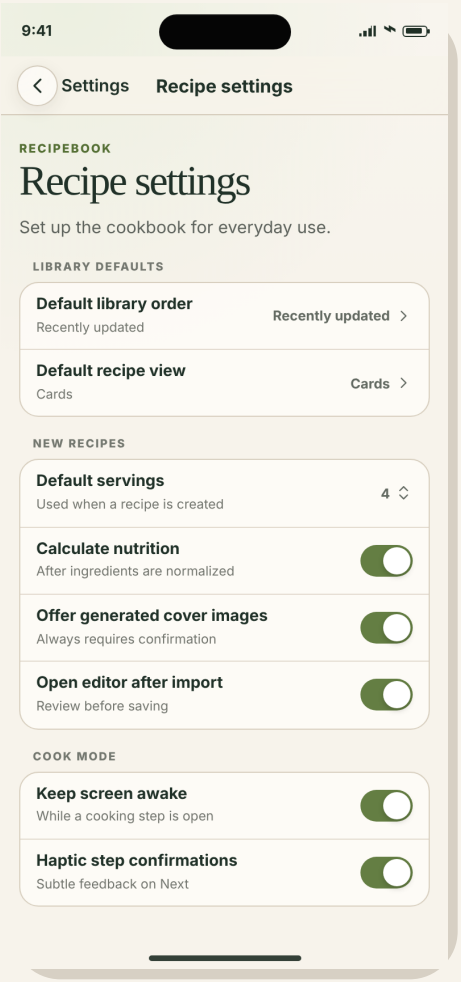

22 Settings

Inset-grouped navigation modeled on native iOS Settings.

23 Profiles & roles

Profile management with clear ownership and role hierarchy.

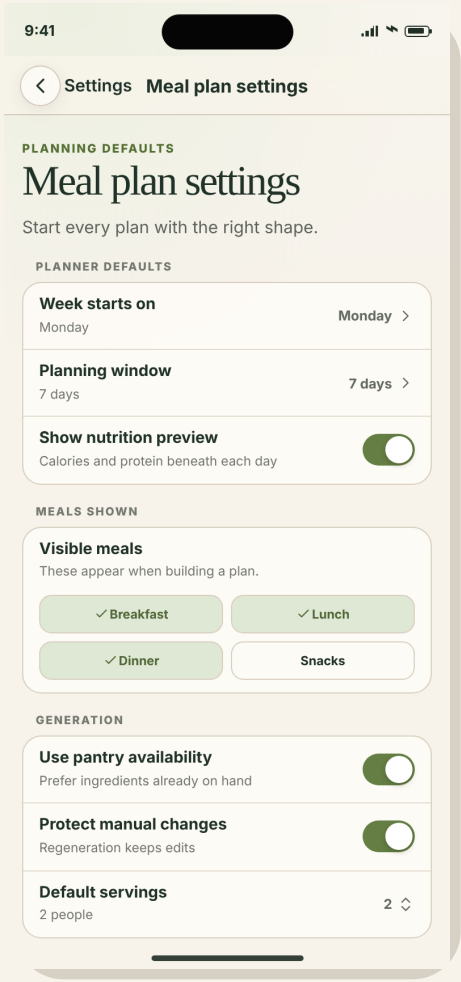

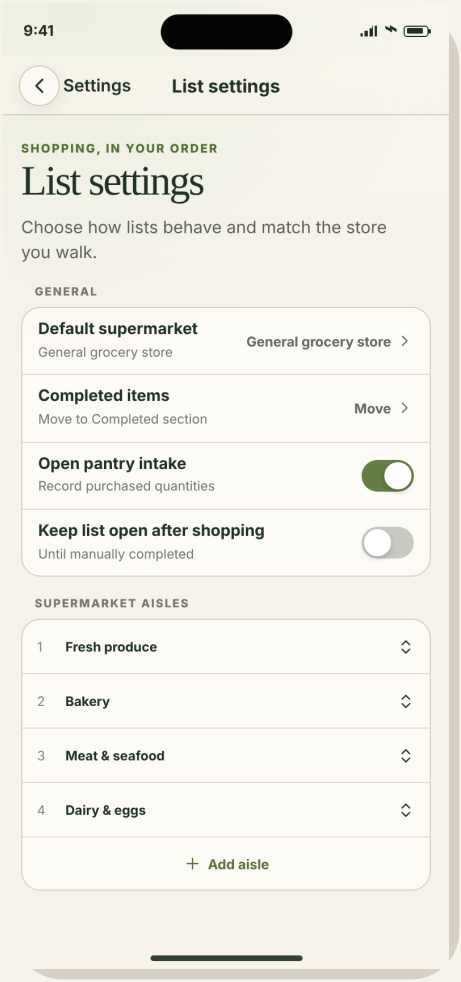

24 Recipe settings

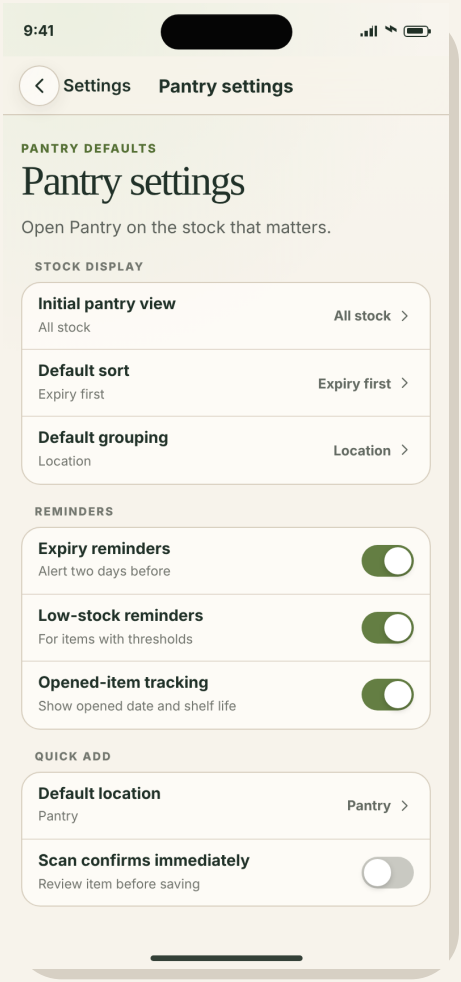

Compact defaults using pickers, steppers, and toggles.

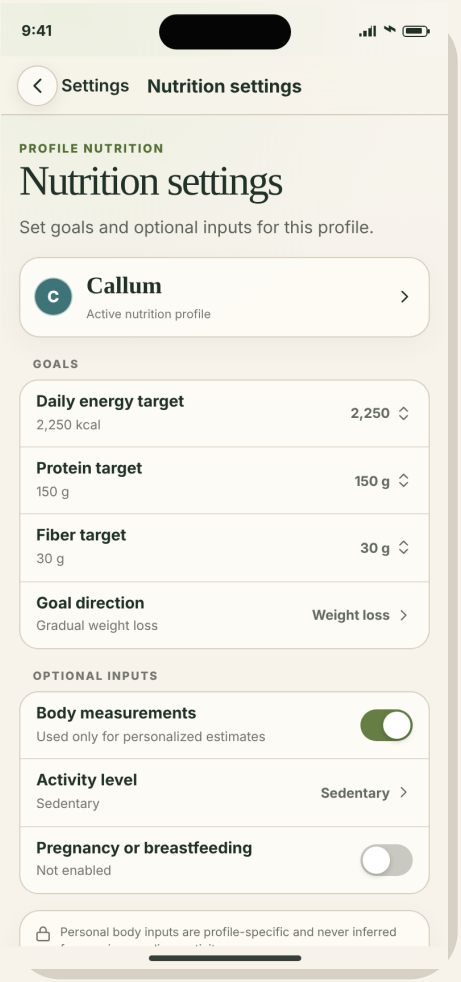

SCREEN SET 25-28

iPhone mockups

25 Meal-plan settings

Planning defaults and meal visibility in native controls.

26 List settings

Store, completion, pantry intake, and aisle organization.

27 Pantry settings

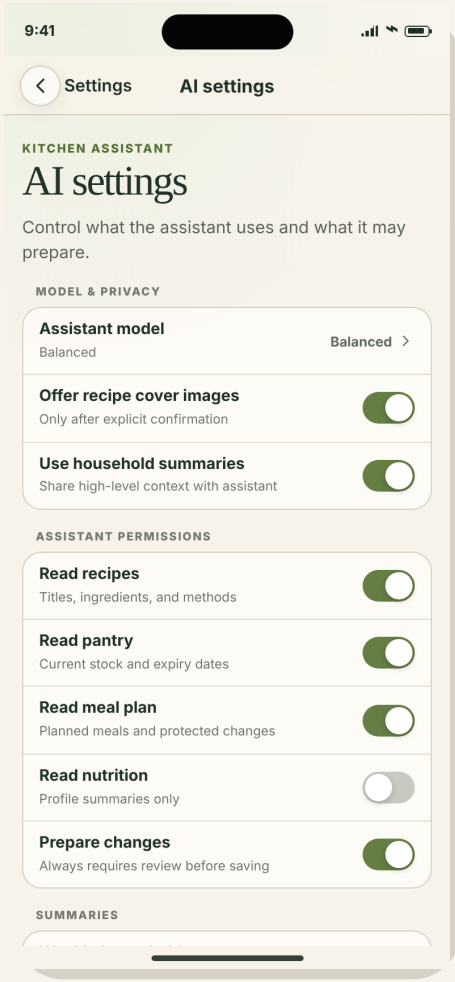

Inventory defaults and expiry reminders.

28 Nutrition settings

Profile-specific goals, units, and optional inputs.

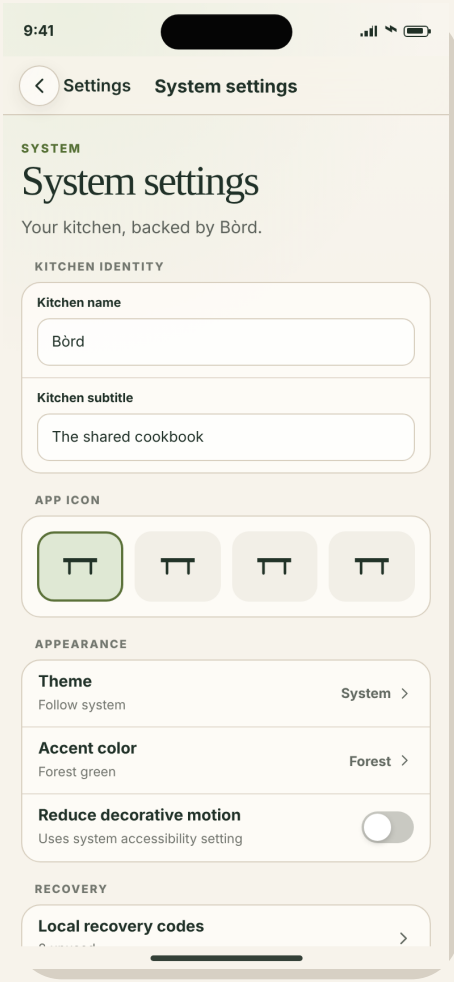

SCREEN SET 29-32

iPhone mockups

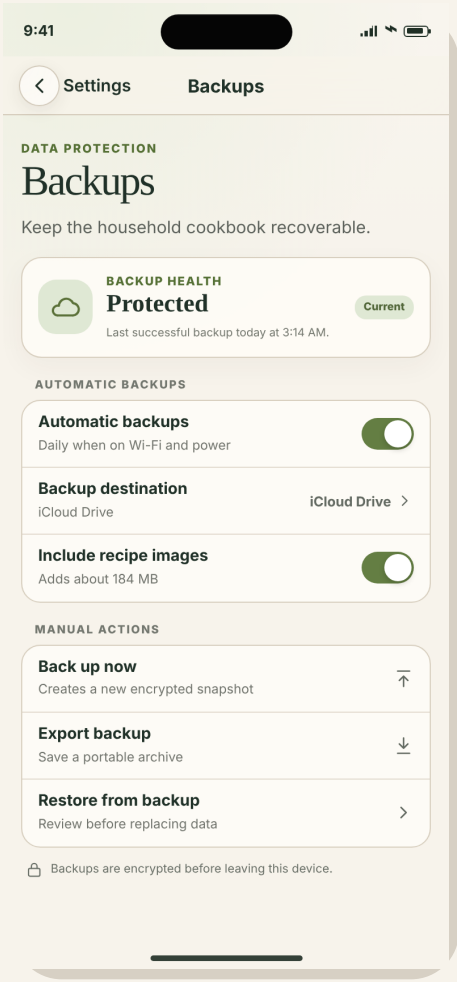

29 AI settings

Explicit permissions, model choice, and privacy controls.

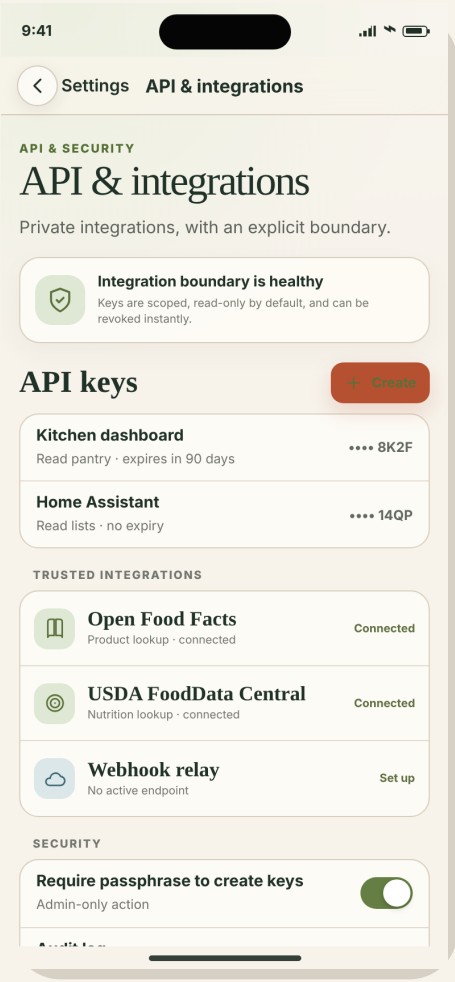

30 System settings

Kitchen identity, appearance, icon, and recovery actions.

31 Backups

Backup health, automation, export, and restore.

32 API & integrations

Scoped keys and trusted integrations with security status.

Build the native shell first

ROUTE ARCHITECTURE

Root
Authentication gate and providers

Five tab stacks
Home / Recipes / Plan / Pantry / Lists

Contextual routes
Nutrition, Assistant, Security, Settings

Recipe workflow
Library - Collections - Tags - Import - Capture - New - Detail - Edit - Cook

System states
Offline overlay, queued sync, conflict review

IMPLEMENTATION ORDER

1. Tokens and routes 2. Tabs and stacks 3. Home and Recipes 4. Detail and Cook 5. Pantry, Plan, Lists, offline 6. Settings and auth 7. Assistant and Nutrition 8. Platform polish

NATIVE-FIRST COMPONENTS

Expo Router

Stacks, form sheets, deep links, per-tab history.

Native tabs

Use behind an abstraction; retain a stable fallback.

@expo/ui SwiftUI

Selectively embed native iOS controls where it adds real value.

Glass effect

Use on iOS 26 controls only; blur/opaque and Material fallbacks.

Lists and gestures

Virtualized lists, swipe actions, previews, context menus.

NON-NEGOTIABLE QUALITY

- **Dynamic Type**
  No essential action or value may disappear at accessibility sizes.
- **Reduced transparency**
  Glass switches to an opaque high-contrast surface.
- **Offline durability**
  Cooking and shopping continue; mutations queue with visible state.
- **Platform adaptation**
  Android keeps the brand but uses Material patterns, not imitation iOS.
- **Data provenance**
  Nutrition and assistant output identify confirmed, estimated, planned, and pending data.
